Abstract

Low adoption of productive agricultural technologies is a puzzle. Agricultural extension services rely on external agents to communicate with farmers, although social networks are known to be the most credible source of information about new technologies. We conduct a large-scale field experiment on communication strategies in which extension workers are partnered with different members of social networks. We show that communicator actions and effort are susceptible to small performance incentives, and adoption rates vary by communicator type. Communicators who face conditions most comparable to target farmers are the most persuasive. Incorporating communication dynamics can enrich the literature on social learning.

¹Contact: BenYishay abeyishay@unsw.edu.au, or Mobarak mushfiq@yale.edu. We gratefully acknowledge the support and cooperation of Bandawe Masopole and many other staff members of the Malawi Ministry of Agriculture, and of David Rubach and Oliver Durnan of the World Bank – Malawi Country Office. Mario Jones managed all aspects of fieldwork extremely well. Nadi Karibisi, Sylus Hankovits, Cristian Valverde and the IFAM-Malawi country office provided invaluable support for data collection. Andrew Carter, Tereza Zelenka, Johann Ewert and Ingrid Halstead provided excellent research assistance. The World Bank Gender and Agriculture Program, World Bank Development Impact Evaluation Initiative (DIME), the Millennium Challenge Corporation, Yale Center for Business and Environment, and the Macmillan Center at Yale University provided financial support. We thank Chris Udey, Florian Ederer, Jonathan Feinstein, Arthur Campbell, Ken Gillingham, Florence Kandylo, Adik Lertnont, Mark Rosenzweig, and seminar participants at Yale University, Georgetown, Vassar College, the University of Sydney, Monash University, University of Queensland, the University of New South Wales, Stanford University SITE, and the 24th BREAD conference for comments. All errors are our own.

Communicating with Farmers through Social Networks
