Building Women's Economic and Social Empowerment

Investing in women is said to be a key to development. In this view, providing education, a cow, or the ingredients for a business will result in great things: increases in income, empowerment, social inclusion, and improved mental health.

In this study, PA researchers studied whether the most vulnerable women could start and sustain small businesses. They evaluated a program by ARSI Uganda, the Women's Nicome Generating Support (WINGS) program. WINGS offered extremely pore people has is business stills staining, enging mentorship, and cash grants with a purchasing power of \$375. WINGS focused on young people in rural northern Uganda, expecially women, who lost nearly everything after 20 years of war. Nearly all fivestock were stoler, nearly all homes were determined, and from both becomes researches.

stroyed, and farm land become overgrown. incomes a 16-months after the grants, WN4SS participants doubled their challenges.

micro-enterprise owners my and earnings, including gate of subout five times the cost of the program. But in space of these economic gains, WINGS had little effect on social integration, health, or empowerement after 16 months.

neath, or empowerment after to months.
The message, the poperation men-have high returns to cash, training and supervision. Notonly cancash-certered programs help the podent start and sustain microenterprises, but they do so cost-effectively. Movingalread, there are ways to improve cost-effectiveness, and programs should note that higher incomes alone may not address women's social and personal

Twenty years of war have left northern tigandars impoverabled. For instance, in 2007, AVSI and two IPA researchers sourceyed more than 1300 young men and so men aged 14 to 35 in northern tigands, including serveral hundred formerly abducted by the rebel Lord's Resistance Army. The evidence account by the receivery and the program of the programs tended to emphasize social and psychological that programs tended to emphasize social and psychological wounds, even-though most people were quite resilient. Meanwhile, programs often ignored young people's top prenty: economic recovery.

ik recovery. ese arch also highlighted huge gendergaps in education

and income. Women tended to be much poorer and vulnerable than men after the wax.

In order to help the porest raise their incomes, in 2009 AVSI identified 10 pmall villages that were beginning to rebuild. They asked each community to identify the 15 poorest young were age 27, had just 2.8 years of schooling on average, and 86 were farming and casual labor, and they worked about 15 hours a week for a few dollars in income.
