Water, Sanitation & Hygiene Stakeholders Forum

Innovations for Poverty Action organized a Policy Forum focusing on sharing learnings on water, sanitation and hygiene interventions in Kenya. The forum was organized within the framework of the Ministry of Health strategies to organically inform policy and decision makers with research findings.

The focus of the Policy Forum was: What is the evidence on water, sanitation & hygiene interventions in Kenya? What is the role that small-scale research projects can play to shape and further inform the government strategy? How can research help answer policy relevant questions? The research dissemination event helped answer these questions by bringing together policy makers, implementing partners, and several researchers to present and discuss their recent research findings in the field of WASH in Kenya.
