Global Behaviors and Perceptions in the COVID-19 Pandemic Survey

Questionnaire Description

We are making publicly available the questionnaire used for the "Global Behaviors and Perceptions in the COVID-19 Pandemic" project, which collects data from a large-scale online survey about COVID-related behaviors, beliefs, perceptions, mental health, and more, covering respondents from more than 170 countries. The data was collected via snowball sampling starting March 20, 2020 through a survey instrument that was translated by volunteers into 69 languages. The project offers a unique snapshot on the evolution of behaviors and perceptions about the pandemic on a global scale in the early and accelerating phases of the COVID-19 outbreak. More data collection is ongoing.
